

World AIDS Day at NNOC High School – December 1, 2025

On December 1st, NNOC High School joined communities worldwide in recognizing World AIDS Day, an annual event dedicated to raising awareness about HIV/AIDS and supporting those affected.

Public Health Nurses hosted an engaging information booth featuring:

- **Pamphlets** with facts about HIV/AIDS prevention and treatment
- **Condom packages** to promote safer practices
- A **presentation board** displaying current statistics and educational content

Students and staff showed their support by wearing red ribbons, a

global symbol of solidarity. The event also included cookies, which were a big hit and helped draw people to the booth for conversation and learning.

What is HIV/AIDS?

HIV (Human Immunodeficiency Virus) attacks the body's own immune system, making it harder to fight off infections and diseases. If untreated, HIV can progress to AIDS (Acquired Immunodeficiency Syndrome), a severe stage of infection where the immune system is badly damaged. HIV is spread through blood, sexual contact, and sharing drug-use equipment. While there is no cure, effective treatment allows people with HIV to live long, healthy lives and prevents transmission.

**Manitoba
has the
rate of
diagnoses
with in
drug use
leading
transm**

Why This Matters

HIV remains a serious public health concern in Manitoba. Recent reports show a troubling rise in cases:

- In 2024, Manitoba recorded 291 new HIV diagnoses, with an incidence rate of 19.5 per 100,000, more than triple the national average.
- Manitoba currently has the highest rate of new HIV diagnoses in Canada, with injection drug

use being the leading mode of transmission.

These numbers highlight the importance of education, prevention, and harm reduction strategies. Events like this help reduce stigma, encourage testing, and provide resources for those who need support.

For more information on HIV prevention and local resources, **visit Manitoba Health's website:** <https://www.gov.mb.ca/health/publichealth/diseases/hiv.html>.

Manitoba currently has the highest rate of new HIV diagnoses in Canada, with injection drug use being the leading mode of transmission.

Shout-Out To All FCWC Employees

As Nisichawayasihk Cree Nation steps into a new year, it's important to acknowledge the hard work and dedication of all Family and Community Wellness Centre employees.

"We have employees here at our main office, but also in South Indian Lake, Thompson, Brandon and Winnipeg, providing services and support to our Citizens every single day," says Felix Walker, FCWC CEO. "I'd like to send out gratitude and commend every staff member for the part you've played in

keeping the ball rolling every day."

Last year was a difficult year, from a community-wide evacuation to power outages during an extremely cold snap. Through it all, FCWC employees came together with perseverance to make it all work.

"Your commitment and determination do not go unnoticed," says Walker. "Our community is lucky to have employees like you."

Here's to another great year in NCN!

Some Heroes Wear Pajamas

On another cold December day, why not inject some cozy glamour with a Pajama Day?

FCWC staff wore their very best flannel to work on December 19 to

jump start the holidays. With the Centre fully decked out in Christmas decorations, spirits were merry and bright!

Take charge of your water safety, right from home!

NEW CISTERN WATER SAMPLING KITS AVAILABLE

Residents can now test
their own cisterns for
coliform bacteria.

HOW IT WORKS

Kits can be picked up from the Public Health Office on Mondays.

To meet the 24-hour testing requirement, samples must be collected no earlier than Monday at 3:00 p.m. and dropped off by 3:00 p.m. on Tuesday.

- Limit: One kit per household per month.
- After you collect your sample, results will be ready in 24 hours.
- You'll be notified of your results on Wednesday.

IMPORTANT GUIDELINES

- The test must be performed within 24 hours of collecting your sample.
- Avoid contamination: These tests are highly sensitive—follow instructions carefully to ensure accurate results.

⚠ IF COLIFORM IS DETECTED:

A resample will be required and a boil water advisory will be issued until the second test confirms safety.

HAVE QUESTIONS OR REQUIRE ASSISTANCE?

Visit us at the Public Health Office or call **204-484-2341**

Clean water is everyone's responsibility. Let's keep our community safe—one sample at a time!

Learning About Shingles

Shingles is a painful skin condition caused by a virus called Varicella-Zoster, which also causes chickenpox.

When someone gets chickenpox, usually as a child, the virus stays inactive in their nerve cells. Years later, it can become active again and cause shingles.

It's important to know that someone with shingles can spread the virus to someone who's never had chickenpox or the chickenpox vaccine. The exposed person would get chickenpox. This means people who have never had chickenpox or the vaccine should avoid direct contact with shingles blisters.

While anyone who has had chickenpox can get shingles, it is most common in adults over age 50. People with weakened immune systems, dealing with chronic illness or high levels of stress are at higher risk.

Common early symptoms are tingling, burning, itching, or pain on one side of the body. Some people feel tired or unwell. After a few days, a painful rash develops in the same area. The rash often forms clusters of fluid-filled blisters that will break open and scab over. A case of shingles usually lasts

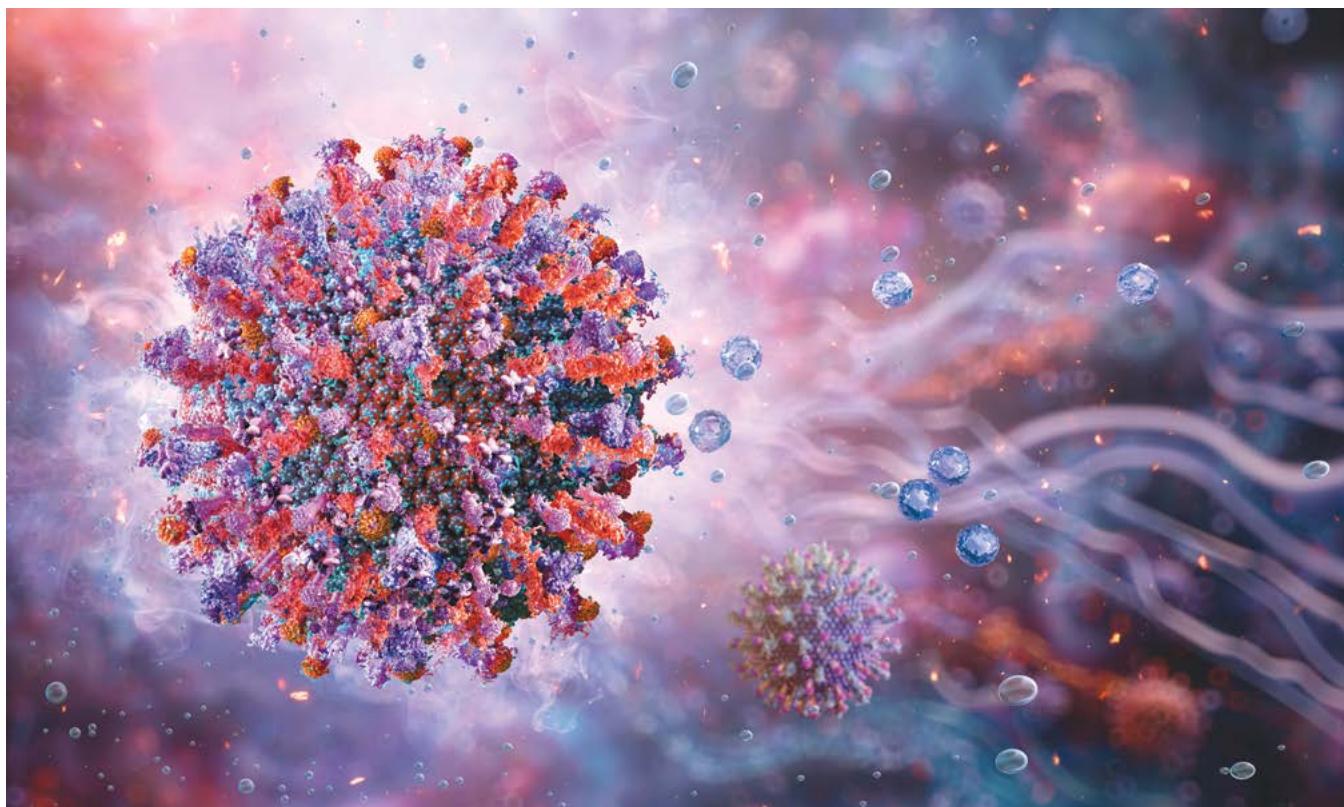

two to four weeks. Even after the skin heals, some people deal with pain for months or even years.

If you think you might have shingles, get in contact with Public Health or the Nursing Station as soon as possible, because treatment works best when started right away.

Like avoiding any other virus, it's important to keep your immune system strong by eating well, getting enough sleep, exercising, and managing stress.

You can avoid shingles or reduce the chance of serious complications with the vaccine. It is a two-needle series

that you get about three months apart. Unfortunately, the Shingrix vaccine is not covered as part of Manitoba's immunization program, and you'll need a prescription from your doctor. Contact Public Health at 204-484-2341 to learn more about your risk of getting shingles and if the vaccine is a good investment for you.

Be a Responsible Dog Owner

Owning a dog is a commitment. Your dog depends on you for love, care, and safety. Here are a few ways to be a responsible pet parent:

Provide Proper Care

Fresh water, nutritious food, and regular vet visits keep your dog healthy and happy.

Exercise & Mental Stimulation

Playtime and exercise is essential for your dog's well-being.

Training & Socialization

Teach basic commands and socialize your dog to prevent behavioural issues and keep everyone safe.

Identification & Safety

Keep identification tags on your dog's collar and always use a leash in public areas.

Spay/Neuter

Help reduce overpopulation and improve your dog's health.

Protect Them From the Cold

Dogs can suffer in freezing temperatures. Provide warm shelter, limit time outside, and use

coats or booties for extra protection.

Prevent Dog Bites

Dog bites can cause serious injuries and infections. Most bites happen when dogs are scared, stressed, or untrained. Always supervise interactions with children, avoid teasing or rough play, and learn your dog's body language to prevent accidents.

Remember:

A dog is family. Treat them with the respect and care they deserve.

Nature's Alarm Clock

The circadian rhythm is your body's built-in clock. It runs on a 24-hour cycle and helps your body to know when to be awake, when to sleep, and when to perform its essential jobs like digesting food, repairing cells and balancing hormones. This internal clock is guided by your brain, but it listens to signals from the outside world, especially light and darkness.

A healthy circadian rhythm is important because it keeps your body in sync. When it's working well, you think more clearly, have more energy

during the day, and fall asleep more easily at night.

Beyond keeping track of your sleep-wake cycle, the circadian rhythm affects almost everything. It helps regulate body temperature, heart rate, and the release of hormones such as melatonin, which helps you feel sleepy, and cortisol, which helps you feel alert. It supports your immune system, helps control your appetite and digestion, keeps your mood steady, and influences how well you can focus or learn.

When your circadian rhythm is not working properly, you might have trouble falling asleep, wake up many times during the night, or feel tired even after a full night's rest. You might feel irritable, have trouble concentrating, or crave unhealthy foods.

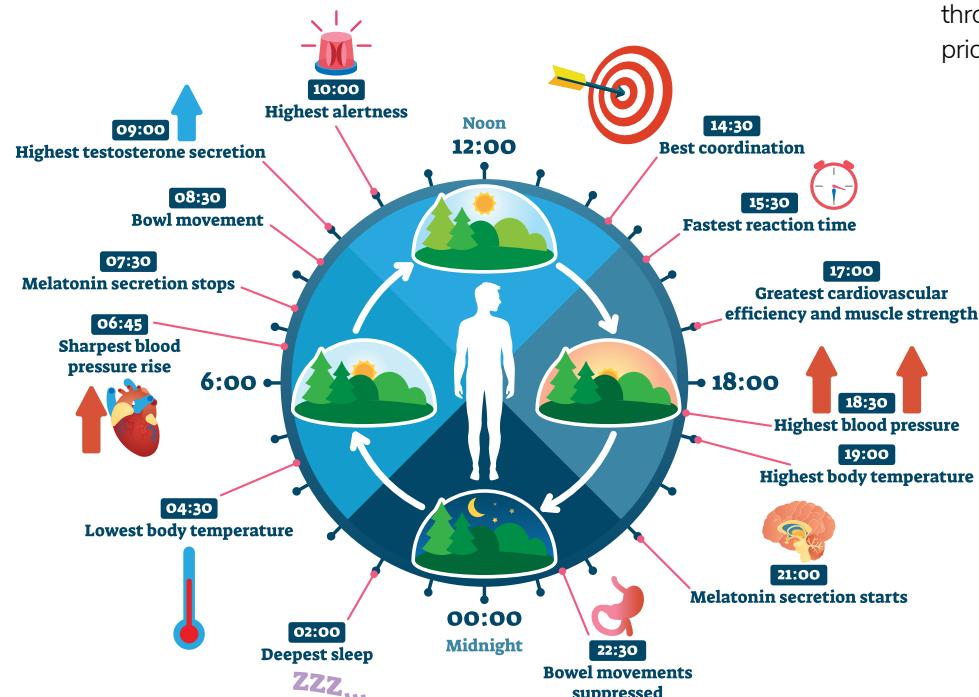

Irregular sleep patterns, staying up too late, and getting too much screen time before bed can all confuse your internal clock. Shift work, jet lag and stress can throw it off, too.

The good news is you can reset and support your circadian rhythm by building healthy habits. Light, routines, and good sleep practices are your most powerful tools. Our short hours of daytime during the winter can throw off your system, so make it a priority to get outside every day!

Why don't you:

- Get bright light in the morning, preferably from natural sunlight.
- Go to bed and wake up at the same time every day, even on weekends.
- Limit screen time for at least an hour before bed.
- Keep your bedroom dark, quiet & cool.
- Avoid caffeine in the late afternoon & evening.
- Be physically active during the day, but avoid hard exercise close to bedtime.
- Eat meals at regular times & avoid heavy snacks a few hours before bed.
- Create a relaxing bedtime routine, like reading or gentle stretching.

CIRCADIAN RHYTHM

Almost all creatures have circadian rhythms, from snakes to whales. Notice the birds that start to chirp at dawn's first light and bats that fly through the trees at twilight. That's the circadian rhythm hard at work! Some animals, such as reindeer in the arctic, have lost theirs because of the extreme light and dark conditions they live in. They have adapted to seasonal changes and external cues instead, for things like migration.

Nurture holistic wellness

Strengthen NCN families with community and culturally-based activities focused on Family Enhancement.

Jordan's Principle assistance is available for children living on-reserve with their birth, adoptive or extended families, and awareness of the program is increasing every year. Most clients become involved with Jordan's Principle through a referral from school, JP staff, family or friends, or another health program in the community. Eligibility Criteria: Children who have or may show signs of any of the following: Developmental delays; Autism spectrum disorder; Permanent physical disabilities; Speech impairment/delays; Attention deficit disorder; Attention deficit hyperactive disorder; Medical needs

For more information call 204-484-2585

All NCN Citizens who live on-reserve in Nisichawayasihk Cree Nation qualify to use the MRH, if there is space available, and if the MRH is capable of providing the care required. (You will be required to provide your referral information from the NCN Nursing Station.) The MRH is set up to accommodate one-day appointments, overnighters, and stays of longer term* in cases of surgery and ongoing treatment. (Extensions may be provided on a case-by-case basis, with proof that you have tried to find another residence.)

Building Blocks To A Healthier You

Vitamin C, also known as ascorbic acid, supports your health in many ways.

It bolsters your immune system so you can effectively fight off colds and infections. It helps your body heal cuts and scrapes by helping to make collagen, which is important for skin, blood vessels and bones. Vitamin C allows your body to absorb iron more readily and acts as an antioxidant, protecting your cells from damage.

Getting enough vitamin C is important for people of all ages. Without appropriate levels, you may feel tired or weak, get sick more often, or notice that cuts take longer to heal.

You may have heard about scurvy, a condition that sailors often developed that included bleeding gum and joint pain, due to no access to Vitamin C for months at a time.

Thankfully, in this day and age, we can usually get enough Vitamin C through our diets. Generally speaking, supplements are not needed, although some people who take daily vitamin C pills say when they get a cold, it doesn't last as long.

How much vitamin C do I need every day?

- Children: 15–45 mg per day

- Teens: 65–75 mg per day
- Adults & Elders: 75–90 mg per day

*One medium orange has about 70 mg of vitamin C. Half a cup of raw red bell pepper has about 95 mg.

How Do I Get Enough Vitamin C?

Instead of pop, try a squeeze of lemon or lime in your drinking water.

Focus on eating a variety of fruits and vegetables every day. Citrus fruits like oranges and grapefruits are great choices, but berries, kiwi, tomatoes, broccoli and bell peppers are also high in vitamin C.

Fresh fruits and vegetables usually have more vitamin C than cooked, so eat them raw or lightly steamed as often as possible.

Keep cut fruits and veggies in the fridge and eat them within a day or two to preserve their vitamin C levels.

Try to get vitamin C at every meal: a handful of blueberries in your morning cereal, veggies and hummus after school, and an orange for a healthy hit of sweet after supper.

For some fun, give a toddler a wedge of lemon or lime to suck on while you supervise. Have a camera ready!

Vitamin C Stir Fry

- 2 T olive oil
- 1 small onion, sliced
- 2 cloves garlic, minced
- 1 T ginger, minced
- 1 red pepper, sliced
- 1 cup broccoli florets
- 1 cup cabbage
- 1 cup thawed shrimp (optional)

Sauce:

- 3 T soy sauce
- 2 T sesame oil
- 1 T peanut butter

Mix sauce ingredients together (you may have to add a few drops of water) and set aside. Heat oil in a pan over medium heat. Cook onion, garlic and ginger for 1–2

minutes until soft. Add vegetables and stir-fry for about 5 minutes, until they are tender but still bright in colour. (If using shrimp, add them in now for 2 minutes.) Add sauce and mix carefully. Serve with rice or noodles.

Join Our NCN Family and Community Wellness Centre and Build Your Future!

At the NCN Family and Community Wellness Centre, we believe in more than just providing jobs—we believe in creating opportunities that empower you to shape your future, strengthen our community, and honour the rich traditions of our people.

We're hiring individuals who are eager to grow, learn, and contribute to the well-being of our community. Whether you're interested in health, counseling services, land-based programs, or administration roles like finance, human resources, or IT, there's a place for you.

Embrace Your Traditions:

■ We value the knowledge of our Elders and integrate traditional skills and teachings into our work. Learn and grow while staying connected to our cultural roots.

Secure Your Future:

■ Competitive wages and benefits provide the foundation for a stable and fulfilling life, allowing you to support those you love.

Make a Difference:

■ Whether you're helping others heal, guiding our youth, preserving our lands, or ensuring our operations run smoothly, your contribution is vital.

Current Opportunities: Ready to apply or want to learn more? Call 204-484-2341 or visit www.ncnwellness.ca for more information.

Join Our Family:

■ Experience a supportive environment where we work together, guided by our shared values, to create a brighter future for all.

Working with the Family and Community Wellness Centre isn't just about earning a paycheck—it's about building a life that honours our traditions and contributes to the strength of our community.

Take the leap, invest in your future, and become part of a family that's committed to making a difference.

Measles

Measles is one of the most highly contagious diseases characterized by a red, blotchy rash. The measles virus spreads through close personal contact with an infected person and through the air when an infected person coughs or sneezes. The virus can be spread by droplets that can stay in the air for several hours. Infection can result in serious illness or death. An infected person can spread the virus from four days before the rash appears until four days after. The disease tends to be more severe in infants and young children and can be life-threatening.

Symptoms of measles generally appear seven to 21 days after exposure. Initial symptoms may include fever, runny nose, drowsiness, irritability and red eyes. Small white spots may also develop on the inside of the mouth or throat. Several days after the initial symptoms, a red blotchy rash appears on the face and progresses down the body. Measles can lead to complications including ear infections, diarrhea, pneumonia (lung infection) and encephalitis (brain inflammation).

Immunization is the only means of protecting people from contracting measles. Contact an immunization provider such as a local public health office, physician or nurse practitioner to ensure everyone is up to date.

Certain people should not get the measles vaccine including infants younger than six months of age, pregnant women and people with weakened immune systems.

For more information and to stay up-to-date with the measles outbreak visit the Manitoba Health website at: <https://www.gov.mb.ca/health/publichealth/diseases/measles.html>.

Manitoba Public Health continues to monitor for measles cases and exposures that occur from cases in Manitoba, and exposures from out of province travellers to Manitoba.

The tables below provide a weekly summary of measles cases in Manitoba since February 2025. Data are updated every Friday. The tables were last updated on January 2, 2026, with data up to December 27, 2025.

Learning from our Elders

Consider how much Elders have seen and experienced over the course of their lives: life on the land, residential schools, abuse and addiction in the community, the rise of technology, hydro development, the erosion and rebirth of culture and language, and their own personal triumphs and setbacks. Our Elders have truly seen it all.

Living a long life through so much change brings a valuable perspective and insight into human nature. Elders' stories can teach us about the mistakes and victories of the past and allows us to

apply their wisdom to our present and future.

As a starting point, think of something you do every day, and ask an Elder how it was when they were young. For example, ask them about what they did after lunch or what they did for fun. Try to gain an understanding of the typical days of their childhood.

Remember that some Elders may be reluctant to talk about the past because it brings up painful memories. That's understandable, and we don't want to pressure them. But when we

avoid asking about the past entirely, we also miss out on the happy stories.

Listening to Elders talk about joyful memories can ignite a curiosity and a passion for traditional teachings and pastimes. If we want young people to nurture our traditional way of life, they need to hear about the way their lives would be enriched. Try a question that will bring up a specific memory, like, "Tell me about something that made your mother laugh."

It can also be insightful to ask Elders for their opinions about life right here, right now. Are things as they expected? Are they surprised by changes in the community and in society? If they could go through your stage of life again, what would they focus on?

Keep in mind that learning from our

Elders helps them, too. Many Elders are lonely, with too much time on their hands. Reminding them of their value will bring a sense of vitality, which will increase their well-being. Connecting with an Elder is good for everyone!

Invite an Elder to

- plant a garden
- gather medicines
- go trapping, hunting, fishing
- create arts & crafts
- talk about their grandparents
- go for a walk
- cook a favourite recipe
- teach you Cree phrases

A Fresh Start For Mental Health

The beginning of a new year is a great time to take stock of our mental wellness and to make changes that will lead to a brighter mindset.

The best tweaks are small, simple and steady. You may feel inspired by January vibes to come up with a huge list of goals, but that's setting yourself up for failure! It can feel overwhelming to think we need to change everything at once. Instead of burning out in a few weeks, start with a few manageable habits to support your well-being for the whole year.

Strong mental wellness can improve sleep, boost energy, and help us handle stress and cope with challenges. It doesn't mean life becomes perfect, but

it does mean we are better equipped to handle ups and downs. When our mental health is strong, it's easier to focus at work or school, enjoy hobbies, care for our families, and contribute to our community.

Mental wellness habits don't have to be expensive or time-consuming. Even a few minutes a day can make a difference. Why don't you:

- Take five minutes to focus on slow breathing to calm the nervous system & reduce stress.
- Go for a short walk outside to improve your mood & clear the mind.
- Write down one or two things you're grateful for to focus on what's going well.

■ Unplug from phones or social media, even for ten minutes, to give your mind a break.

■ Drink water every time you walk through the kitchen, to keep your brain well hydrated.

The key to these new habits is not how big the idea is, but how often you return to it. Small actions, repeated regularly, can have a big payoff over time.

Many people struggle with new habits because they expect quick results or feel guilty when they miss a day. Remember that mental wellness is not about perfection. Missing a day doesn't mean failure; it just means you start again tomorrow. Another common challenge is feeling too busy. Remind yourself that caring for your mental health helps you show up better for everything else in your life. Shave off a few minutes from a not-great habit and apply it to a healthy one instead.

By starting now with small habits that feel manageable, you can build a strong foundation for mental wellness that supports you all year long.

How To Make A Habit Stick

- Stay realistic. Aim for five minutes a day instead of planning for an hour and giving up.
- Link a new habit to something you already do, like taking a few deep breaths after brushing your teeth.
- Track your habits on a calendar or an app to provide motivation & a sense of progress.
- Share your habits with a friend to make it fun.

St. Amant

St. Amant and Nelson House Jordan's Principle present a lunchtime workshop:

- ❖ Understanding Autism and Intellectual Disabilities
- ❖ Managing Challenging Behaviours

Presenter:
Rob Jeffrey, Jordan's Principle Behaviour Analyst, St. Amant

Date: Wednesday, January 14, 2026
Location: Nelson House Jordan's Principle Office
Time: 11:00am – 1:00 PM
Free to attend!!
For family members, Jordan's Principle staff, and all others interested in learning about ASD and managing behaviour

On the date of January 14, 2025. FCWC Staff members along with families within the community came together for a luncheon workshop. The event was hosted by Rob Jeffery, Jordan Principals behavioural analyst at St. Amant. Understanding autism, intellectual disabilities, as well as managing challenging behaviours was the focus of presentation. By being able to comprehend the complexities of autism and associated behaviours. We thank everyone that participated in this program, thus bring a further understanding of those effected by this condition.

Understanding Autism

It's important to note that autism is not a disease or illness; rather, it represents a different way of processing information and interacting with the world. Individuals with autism can lead fulfilling lives, and many have unique strengths and talents.

Support and interventions can help individuals with autism navigate challenges and enhance their quality of life.

In summary, autism is a lifelong condition that affects how individuals communicate and interact with others, and it encompasses a wide range of experiences and abilities. Understanding autism is crucial for fostering acceptance and support for those on the spectrum.

Free Narcan Kits To Protect Citizens

Naloxone is a medicine used in emergencies to reverse opioid overdoses. You may have heard it called Narcan, which is its brand name.

Common opioids include fentanyl, heroin, morphine and other pain medications, which work by slowing down the brain and body. When someone takes too much of an opioid, their breathing may slow down or even stop, which can be life-threatening.

Naloxone works by quickly attaching to the same parts of the brain as the opioid and blocking or reversing its

Free naloxone kits are available at the Family and Community Wellness Centre.

effects so breathing can begin again, usually within a few minutes.

Recognizing an opioid overdose is critical. Signs include very slow or stopped breathing, inability to wake up, limp body, tiny pinpoint pupils, pale or clammy skin, and slow or no heartbeat.

While naloxone used to be only available by prescription, Health Canada changed its status so that it can be more accessible to people and places that may need it.

Free naloxone kits are available

at the Family and Community Wellness Centre. If you or your family members or friends are at risk of opioid overdose, you should have one available. The kit usually includes an instruction sheet, alcohol swabs, gloves, a breathing mask, syringes and naloxone vials.

If you suspect an overdose, even if you plan to use naloxone, call 911 immediately. Naloxone only works for 30 minutes and maybe up to two hours, and the person may need further medical care.

Having naloxone available and knowing how to use it can save lives. Everyone in the our community benefits when more people can recognize an opioid overdose and act quickly and safely.

To learn how to recognize opioid poisoning and how to use naloxone safely, you can take free online training at the St. John Ambulance Canada website.

Contact the Public Health office at 204-484-2341 if you have questions, or to request a free Narcan kit.

Narcan kits are saving lives!

In Alberta, for every 10,000 naloxone kits in circulation, there was a 24 per cent decrease in opioid-related deaths. If no naloxone kits had been distributed, the province would have experienced about 815 more deaths in almost five years than were actually recorded.

Diabetes Integration Programs

The Diabetes Integration Project (DIP) is a mobile diabetes care and treatment model that supports First Nation adults living with Type 2 Diabetes. It provides services on-reserve to prevent or delay diabetes complications, including monitoring diabetes status, screening for complications, and providing diabetes education. The DIP also offers referrals to other health care providers based on individual needs.

The Framework for Diabetes in Canada aims to improve the lives of people with diabetes and reduce the burden on healthcare systems. It includes five key elements: adequate resources, measurable progress, comprehensive data, inclusive education, and research.

The National Indigenous Diabetes Association has developed a guide called "Pathway to Wellness" to help Indigenous Peoples understand diabetes and prevent it. This guide is a joint initiative with the National

Indigenous Diabetes Association, the Spirit Healthcare Group, the Canadian Association of Optometrists, and the Diabetes Integration Project.
www.canada.ca

These programs and frameworks are designed to provide comprehensive care and support for individuals living with diabetes, addressing their needs and improving health outcomes.

Hunting and Gathering from Land Base Staff in South Indian Lake

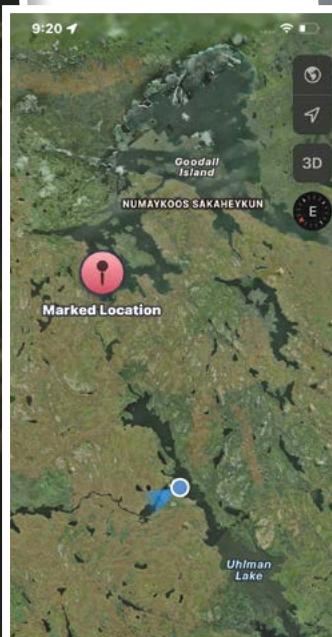

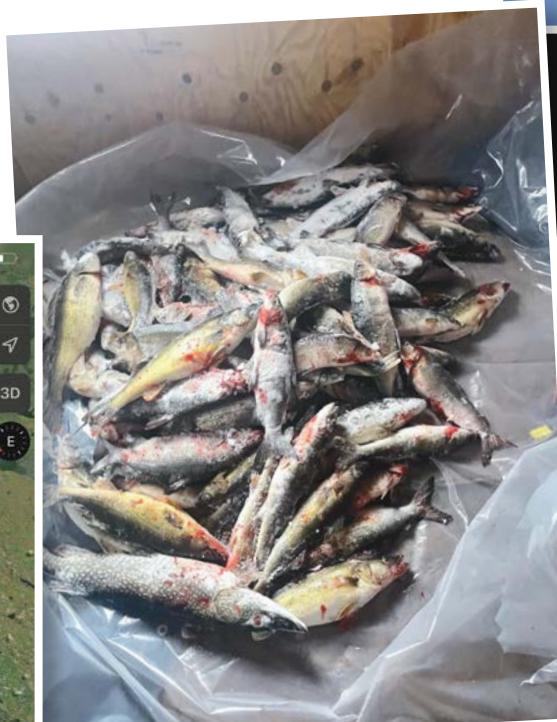

From the dates of January 12, 2025 to January 19, 2025. The NCN Land base crew went out on a Hunting & fishing gathering trip.

They spent the next 10 days in camp fishing as well as hunting as an annual trip taken each year from the department. Land base assistant Supervisor Slade Wilson lead the trip and ensured everything was done accordingly. Though they did not manage to get a moose or caribou. The trip

went off without a hitch. The crew managed to catch a lot of fish and cleaned them out. Cleaning the fish is an intricate part of the trip. By cleaning the fish thoroughly, thus eliminating the need to watch out for bones and other parts of the fish (Guts, fins, head etc.). In total there were approximately 10 crew members that took part in this trip. All in which were in proper gear to withstand the elements.

Upon return all

equipment was sorted and put away for next scheduled outing. Fish is going to be distributed with community and elders that request to have dropped off or picked up.

EMPLOYMENT OPPORTUNITY: Full-time Permanent Case Manager Position Available

Title: Case Manager

Location: South Indian Lake, Manitoba, sub office

Job Summary:

This position reports to the Director of CFS and is responsible for providing services to CFS clients who need Child and Family Services. The Case Manager also completes the assessments, crisis intervention, supportive counselling, and development of service plans, assists with basic needs, advocacy, and referral services.

Phone: 204-484-2341 Fax: 204-484-2351

Could You Be A Foster Parent?

In the past, children were placed in unfamiliar households, which was not an effective way to heal families. The kids would feel disconnected from their roots, culture and way of life. It often led to depression, low self-worth and addiction.

Now we know it's best to keep children within our NCN community. Staying in a home with the same background helps them to believe they have people who care for them and allows them to continue in school and activities with minimal disruption.

Foster families receive funds to cover

Caring for a child on a temporary basis can be difficult and beautiful. Many say foster parenting is a unique calling. Could it be yours?

the costs of food, clothing, medication and activities for a foster child, but it's not enough that you can consider fostering a job. Money should not be your main motivation. Instead, think about helping a child and your community.

Before becoming a foster parent, there are RCMP criminal and child abuse checks and an assessment of your home. You'll attend sessions to ensure you can care for a foster

child, and you'll receive additional training if the child has unique needs.

Your foster child may be angry, sad and scared, so you'll help them deal

with their emotions. You'll provide a safe, stable environment so they can focus on being a kid! You must remain respectful about their family and prepare your foster child to return to their home, whether it's days, weeks, months or years from now.

Caring for a child on a temporary basis can be difficult and beautiful. Many say foster parenting is a unique calling. Could it be yours?

If you are an NCN Citizen and live here or in Winnipeg, Northern Manitoba, Thompson, Leaf Rapids, South Indian Lake, Brandon or Portage, let's see if fostering is a good fit for your family! Call us at 204-484-2341, and ask to be directed to Foster Care Program.

Ask yourself:

- Do you have space in your home & your heart for another child?

- Are other family members ready for another child?
- Does your home have a calm atmosphere with rules & routines?
- Do you have the patience to care for someone who may be sad, mad & confused?
- Are you financially comfortable?
- Can you talk honestly about your home & your feelings with case workers?
- Can you love a child & then watch them go home again?

Do you and your children need help?

If your children are in danger, or living in unsafe conditions, please call us right now at 204-484-2341. You're making the right decision. We can help you & your children.

Learning About Gestational Diabetes

A diagnosis of gestational diabetes means a mother's body is having trouble managing the amount of sugar (glucose) in her blood while she's pregnant.

Normally, the hormone insulin helps sugar move from your blood into your cells where it's used for energy. But during pregnancy, the placenta creates hormones that can make the body less responsive to insulin. If the pancreas can't keep up by making more insulin, blood sugar levels stay high, which creates gestational diabetes.

In Indigenous communities in Canada, up to 20 per cent of pregnant women are diagnosed with gestational diabetes, usually in their second half of pregnancy.

In Indigenous communities in Canada, up to 20 per cent of pregnant women are diagnosed with gestational diabetes, usually in their second half of pregnancy.

Mothers who receive this diagnosis can have complications. High blood sugar can increase the chances of developing high blood pressure (preeclampsia); requiring a C-section delivery; and having type 2 diabetes later in life.

There can be problems for the baby, too. They may grow larger than usual, which can cause birth injuries. They have a higher chance of becoming overweight and developing type 2 diabetes.

Finding out if you have gestational

diabetes usually involves a glucose tolerance test. You will fast, then drink a sugary solution and have your blood tested after a few hours.

If you get a positive diagnosis, you'll need to focus on healthy eating and regular physical activity. You might receive medications and regular blood sugar checks.

Most of the time, gestational diabetes goes away after the baby is born. But because it happened, your health care team will monitor both you and your baby in regular checkups.

Gestational diabetes sounds scary, but most people have healthy pregnancies and healthy babies.

Training For Substance Abuse Support

In December, several FCWC staff members completed nationally accredited Drug & Alcohol Prevention Training in Thompson, led by Integrative Mindfulness Center.

"It was truly an excellent experience for us—your energy, teamwork, and motivation made the training special," said Ashton, the program administrator.

Participants focused on understanding family addiction dynamics and codependency roles; recognizing neurological impacts; stages of change; recovery processes; and identifying signs of substance use in family, friends and co-workers.

Attendees also participated in group activities designed to identify substance abuse prevention strategies while cultivating a positive outlook and empathy.

Pamela Moore, Education & Training Director, offered her congratulations to the participants.

"Your dedication and commitment to furthering your education in order to assist, support and guide our clients is commendable. We are grateful and fortunate to have you all on our team!"

Employees who received their certification:

Family Enhancement Program:

- Edith Moody
- Kimberly Spence
- Charlene Kobliski
- Issiah Constant
- Jenine Hart
- Farrah Spence
- Melfina Primrose

Education & Training:

- Pamela Moore

Designated Intake:

- Florette Moore

Thompson Wechihitowin Program:

- Vezna McKenna-Swanson
- Lorette Stevens

South Indian Lake CFS:

- Lorraine Baker
- Rose Linklater

Thompson CFS:

- Renae Sauve
- Amy Hamel
- Tania Martens

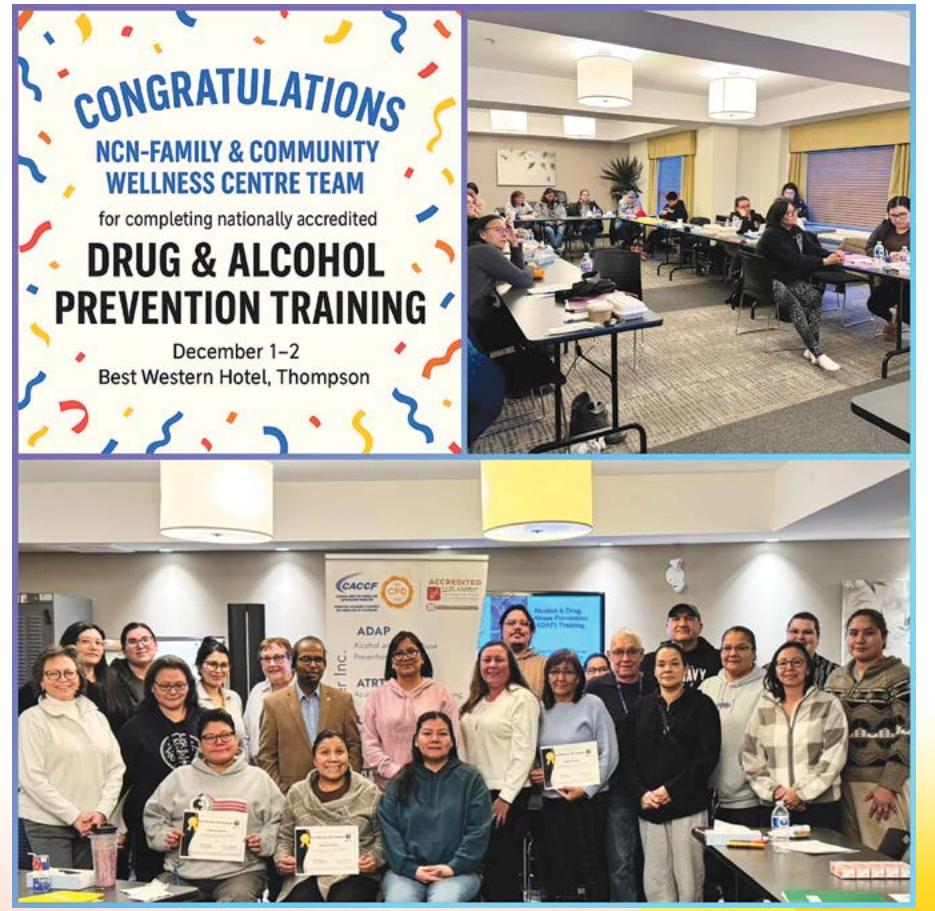

Drugs and Alcohol Prevention Training

This in-depth **training** explores the complex dynamics of **drug** and **alcohol** use, the psychological and neurological underpinnings of addiction, and the human stories behind dependency. Several Family Wellness & Community Centre took part in this program and completed each portion of it throughout the dates of December 1,2 2025. The event was held at The Best Western Hotel, Thompson Manitoba. And after discussing the program with a few staff members. They really enjoyed the topics at hand and recommend it to anyone interested in gaining more knowledge in this particular field.

Alcohol and Drug Abuse Prevention (ADAP) and Awareness Training

The Alcohol and Drug Abuse Prevention (ADAP) and Awareness

Training is an in-depth course that explores the complex dynamics of drug and alcohol use, the psychological and neurological underpinnings of addiction, and the human stories behind dependency. This training provides a foundation in understanding the psychology and neuroscience of addiction, including how neurotransmitters function and how addiction is categorized as a disease. Participants will learn about different substances of abuse—from alcohol and cannabis to prescription drugs, narcotics, and designer substances—alongside their medical and psychosocial impacts. Through interactive discussions, real-world case examples, and practical tools, participants will leave with the insight and confidence to recognize substance abuse, respond effectively, and foster healthier environments at home, work, and in the community.

Vitamin D: Building Blocks To A Healthier You

Vitamin D is a great cheerleader for your body. It helps the body stay strong and healthy, by supporting systems including our skeleton, muscles and immune system.

It helps the body absorb calcium, which keeps bones and teeth strong; helps muscles to move properly; and supports our immune system so we can fight off infections. When we have enough vitamin D, our bodies function more efficiently and we feel healthier overall.

Not having enough vitamin D can cause long-term problems. Children who don't get enough may develop poorly formed or soft bones, which can be prone to breaking. Adults who are low in vitamin D may feel tired, have muscle weakness, or experience bone pain. When levels of this nutrient are low over a lifetime, the risk of osteoporosis is higher. Insufficient Vitamin D has even been connected to auto-immune diseases like multiple sclerosis and rheumatoid arthritis.

How much vitamin D do I need every day?

- Children: about 600 international units (IU)
- Teens & adults: about 600 IU
- Elders over 70: about 800 IU

*A typical piece of salmon contains about 525 IU. A hard-boiled egg has about 50 IU.

How Do I Get Enough Vitamin D?

Vitamin D is often called the "sunshine vitamin" because our bodies can make it when our skin is exposed to sunlight. That means the easiest (and most fun!) way to get more vitamin D is to spend time in the sun. Of course, this can be more difficult in Northern Manitoba, but we all know there is no bad weather, just bad clothing! Wrap up appropriately and get outside for at least 15 minutes a day.

Many foods are fortified with Vitamin D, such as milk, orange juice, and cereals. Read the labels carefully to ensure the Vitamin D you're gaining isn't cancelled out by too much sugar!

Fatty fish, like salmon, sardines and anchovies are naturally rich in Vitamin D. Sneak a can of minced sardines into your tuna salad and no one will notice. Use anchovy paste in your homemade salad dressing to bring some salty goodness. Bring salmon into your weekly rotation.

Consider talking to your health professional about a vitamin D supplement. Recent research suggests people in northern areas

of the world may all be insufficient in Vitamin D. People often supplement up to 2,000 IU a day.

Salmon Lemon Bake

- 1 piece of salmon
- 1 T olive oil
- salt & pepper
- 2 lemon slices

Place the salmon on a baking sheet. Drizzle with olive oil and sprinkle with salt and pepper. Lay the lemon slices on top. Bake at 375°F for about 12 minutes, or

until the salmon flakes easily with a fork. Serve with safely foraged wild mushrooms, which are a great source of Vitamin D, and steamed greens like kale or cabbage.

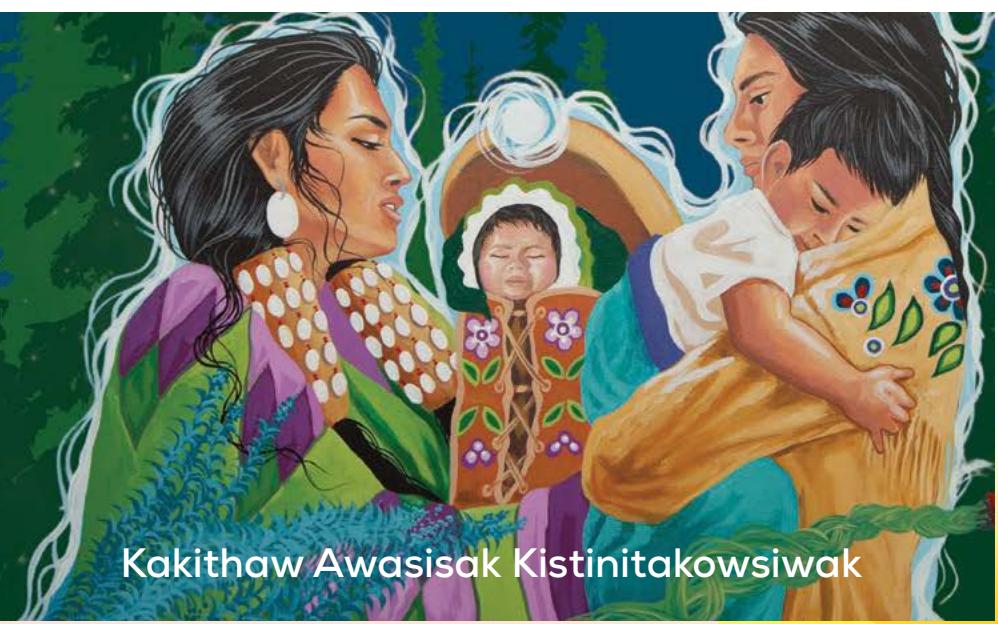

Every child is sacred.

Bed Bugs: What You Need to Know – Province of Manitoba

What Are Bed Bugs?

Bed bugs are small, wingless brown insects—about the size of an apple seed—living off human blood. They're nocturnal, hiding by day in mattress seams, bed frames, furniture creases, and behind baseboards, emerging at night to feed.

Are They Dangerous?

Although they don't spread disease, bed bugs can cause itchy red bumps. Scratching may lead to secondary skin infections. They are a "nuisance pest" per Health Canada and aren't required to be reported under Manitoba's Public Health Act.

Life Cycle & Behaviour

Bed bugs go through three stages—egg, nymph, adult. Eggs hatch in 6–17 days; adults can live up to a year. They feed soon after hatching and rely on humans to survive.

How They Spread

Anyone can bring bed bugs home—**cleanliness doesn't matter**. They hitch rides on clothing, luggage, used furniture, electronics, books—virtually anything moved from one place to another.

Signs of Infestation

- Tiny dark or reddish-brown stains on bedding or furniture
- Shed skins from growing juveniles
- Live or dead bed bugs

Dealing with bed bugs can cause anxiety, stress, and even stigma—but it's not a hygiene issue. Prompt, informed action is key. Resources and support services are available across Manitoba.

- Musty, sweet odour in severe cases
- Red, itchy bites—often in clusters—on the face, neck, upper body, arms, and hands

Prevention Tips

- Thoroughly inspect used furniture, mattresses, and electronics before bringing them into your home
- When travelling, check mattresses, box springs, and headboards; keep luggage on racks or in bathtubs
- Upon return: vacuum luggage, wash clothes in hot water and dry on high for 15–20 minutes to kill all bed bug stages. Note: freezing alone won't kill eggs

Reducing Stress & Stigma

Dealing with bed bugs can cause anxiety, stress, and even stigma—but it's not a hygiene issue. Prompt, informed action is key. Resources and support services are available across Manitoba.

Need Help?

Visit the Province of Manitoba's bed bugs website or contact their hotline:
